PROJECTS

Secure Keyword Search and Data Sharing Mechanism for Cloud Computing —

Played a pivotal role in architecting and implementing an advanced encryption and decryption framework to enable secure keyword search and data sharing within cloud computing environments. Developed cryptographic algorithms and protocols to ensure end-to-end data protection while maintaining search efficiency and data accessibility.

Smart Waste Management —

-**Central System**: Gathers data from smart bins, analyzes fill levels, predicts when bins will be full, and optimizes collection routes to improve efficiency and reduce costs.
